the protection of water resources from deterioration in quality by pollution discharges is probably the biggest challenge in sustainable water resources management in the recent decades in practice most countries have adopted pollution control strategies and measures which are based on end of pipe solutions wastewater treatment plants and adjustments to the regulations including taxes for wastewater discharges conventional strategy although this approach involves very high costs

on many occasions this strategy has been a complete failure the research described in this book contribute to the development of sustainable solutions for the previously outlined problem it was based on the validation of the three step strategic approach concept 3 ssa which includes 1 prevention or minimisation of waste production 2 treatment aimed at recovery and reuse of waste components and 3 disposal of remaining waste with stimulation of natural self purification of the receiving water body the study showed overall positive effects of the 3 ssa in comparison of conventional strategy on wastewater management in the upper basin 389 km of the cauca river the second most important river in colombia the cost benefit analysis clearly favoured the 3 ssa generating a major impact on the river water quality at lower cost compared to the conventional strategy

el presente manual supone una herramienta didáctica de gran utilidad para los alumnos de ingeniería sanitaria y de otras materias afines impartidas en la carrera de ingeniería civil el libro se concibe como la segunda parte de infraestructuras hidráulico sanitarias i abastecimiento y distribución de agua la bibliografía compilada en esta ocasión se centra en cuestiones relativas a la normativa vigente las técnicas y los proyectos vinculados al saneamiento y al drenaje urbano arturo trapote jaume es doctor ingeniero de caminos canales y puertos por la universidad politécnica de madrid y profesor de ingeniería sanitaria en la escuela politécnica superior de la universidad de alicante

este libro es fruto de la experiencia acumulada a lo largo de las clases que he impartido sobre los fundamentos de la contaminación atmosférica a estudiantes universitarios de los últimos semestres del programa de ingeniería ambiental de la universidad de medellín el objetivo principal de este texto es presentar de una forma rigurosa y cuantitativa muchos de los fundamentos necesarios para el análisis del problema de la contaminación atmosférica son ya varios los libros publicados que tratan este tema desde un punto de vista puramente descriptivo sin embargo no se pone en tela de juicio el indudable valor que estas formas de considerar la contaminación atmosférica tienen para el principiante y para las personas con una educación de carácter no científico el libro explica los diferentes tipos de contaminantes que pueden ser descargados en el aire y cómo se dispersan dentro de la atmósfera entonces se presenta una explicación detallada de los métodos para el monitoreo y el análisis de los contaminantes en este punto quien emite contaminantes al aire debe poder caracterizar sus emisiones en términos de calidad y cantidad y estimar cómo esos contaminantes entran y son distribuidos a través de la atmósfera
