the present book is intended to be a systematic text on topological vector spaces and presupposes familiarity with the elements of general topology and linear algebra the author has found it unnecessary to rederive these results since they are equally basic for many other areas of mathematics and every beginning graduate student is likely to have made their acquaintance simi larly the elementary facts on hilbert and banach spaces are widely known and are not discussed in detail in this book which is plainly addressed to those readers who have attained and wish to get beyond the introductory level the book has its origin in courses given by the author at washington state university the university of michigan and the university of ttibingen in the years 1958 1963 at that time there existed no reasonably ccmplete text on topological vector spaces in english and there seemed to be a genuine need for a book on this subject this situation changed in 1963 with the appearance of the book by kelley namioka et al 1 which through its many elegant proofs has had some influence on the final draft of this manuscript yet the two books appear to be sufficiently different in spirit and subject matter to justify the publication of this manuscript in particular the present book includes a discussion of topological tensor products nuclear spaces ordered topological vector spaces and an appendix on positive operators

maintaining the standard of excellence set by the previous edition this textbook covers the basic geometry of two and three dimensional spaces written by a master expositor leading researcher in the field and macarthur fellow it includes experiments to determine the true shape of the universe and contains illustrated examples and engaging exercises that teach mind expanding ideas in an intuitive and informal way bridging the gap from geometry to the latest work in observational cosmology the book illustrates the connection between geometry and the behavior of the physical universe and explains how radiation remaining from the big bang may reveal the actual shape of the universe

this new book offers a fresh approach to matrix and linear algebra by providing a balanced blend of applications theory and computation while highlighting their interdependence intended for a one semester course applied linear algebra and matrix analysis places special emphasis on linear algebra as an experimental science with numerous examples computer exercises and projects while the flavor is heavily computational and experimental the text is independent of specific hardware or software platforms throughout the book significant motivating examples are woven into the text and each section ends with a set of exercises

presents previously unpublished material on the fundumental pronciples and

properties of orlicz sequence and function spaces examines the sample path behavior of stochastic processes provides practical applications in statistics and probability

this book offers an elementary and engaging introduction to operator theory on the hardy hilbert space it provides a firm foundation for the study of all spaces of analytic functions and of the operators on them blending techniques from soft and hard analysis the book contains clear and beautiful proofs there are numerous exercises at the end of each chapter along with a brief guide for further study which includes references to applications to topics in engineering

space is no longer the special protected domain that it was in the past because of the importance of its practical applications it is becoming integrated into the mainstream of economic activity technology push is giving way to the assessment of market opportunities and demand pull funding from the public sector is declining while interest in private financing is steadily growing the value added and service industries are increasing in importance new technologies will be developed in a context of privatisation de regulation and globalization an international and interdisciplinary symposium was organized by the international space university to bring together a diverse group of people technical and non technical engaged in the creation of new approaches to space applications in order to share experiences and to exchange ideas on the way forward the proceedings of this symposium make stimulating reading for all who are engaged in the market place of space and its applications
